ALUMINUM PIGMENTS IN DISPERSION LEAFING AND NON LEAFING

LEAFING TYPE PROPERTIES

- Excellent floating property in the humid film.
- High reflectance and metallic appearance.
- Enables the aluminum particles humectation.

NON LEAFING TYPE PROPERTIES

- Polychrome metallic effects may be obtained by adding organic clear pigments of different colors.

APPLICATIONS

Leafing applications: Roof coatings, decorative coatings, industrial and maintenance coatings, aerosols, craft coatings and tank coatings.

Non leafing applications: Hammer finish coatings, decorative coatings, industrial and maintenance coatings, aerosols and polychrome finishing.

ALUMINUM PIGMENTS IN DISPERSION LEAFING AND NON LEAFING

Aluminum pigments of irregular flakes, dispersed in resins and solvents that as an integral product, enables metallic particles separation, minimizing mixing times during the painting formulation.

Enriches the final product and saves energy costs during the productive process.

Silver colored dispersions are also available in:

- Leafing type
- Non leafing type
- Coarse grades
- Medium grades
- Fine grades
- Brilliant
- Extra brilliant

Our shade cards show the coloring, fineness and properties for the different applications.

Other shades and qualities may be prepared as special products.

QUALITY POLICY

As a metallic pigments manufacturer, Metapol assumes the commitment of giving service and attention to our clients in order to achieve their confidence and satisfaction, has established a value chain and objectives, verifying its periodical fulfillment, applying continuous improvement and measuring the Quality Management System effectiveness of such form that is fulfilled the fact:

“THE EXCELLENCE OF METAPOL RESIDES IN ITS QUALITY”
