Particle size D-50 2.5-3.5
(microns)

Bronze pigments in powder rich gold color

“CUBRIO LINE”

- **Classic**

Ideal for bronzing machines and labels application.

- **Ultra brilliant**

For decorative coatings elaboration and textile application; it is recommended for ceramics specialized coatings with high brilliance degree.

- **Brilliant**

For aerosols formulations and all those applications that require a smooth finish to the tact.

- **Coatings**

Used for high quality coatings, aerosols, paper coatings and screen printing.

- **Printers**

For liquid inks manufacturing (gravure and flexographic printing), its excellent brightness and hiding power make them ideal for this kind of printing.

- **Offset**

For offset inks that operate in high speed printing presses, as much in sheet machines as in continuous, keeping clearness, cleanliness and brightness.

APPLICATIONS

Decorative coatings, textile, aerosols, screen printing, craft coatings, leather applications, paper coatings, flexographic printing, gravure printing and offset inks.

BRONZE PIGMENTS IN POWDER RICH GOLD COLOR

The metallic pigments of CUBRIO line are the result of a copper/zinc alloy in different proportions; obtained by a milling process that generates "flake" form particles in colors with metallic appearance and excellent brightness.

Used for different applications such as coatings and inks.

CUBRIO line also available in:

- **Powder**
- **Solvent based paste at 90% of solids (Meta Line).**
- **Water based paste at 85% of solids (Hydropaste Line).**
- **Pellets (Seguriflex Line)**

Our shade cards show the coloring, fineness and properties for the different applications.

Other shades and qualities may be prepared as special products.
